

ENSE271 Group Project - Activity 1 Customer Meet-Up Notes

In our first meeting, the RMO provided a lot of great feedback, with a number of new ideas and suggestions. These include:

New Feature Ideas:

Based on high to low priority, RMO members would like:

- A search bar (based on title) to search for / filter exercises and music sheets
- A “getting to know you” feature members use to learn more about each other
- The ability to find new music by season
- Possible pinning feature to put relevant music on the top
- Option to receive notification when new sheets, updates, newsletters are posted
- Recent audio attached to music sheets (with ability to slow down music rehearsal recordings)
- Built-in function to confirm which activity members are attending on the calendar
- Bigger fonts to make visibility easier
- Chat on website
- Ability to use websites to sell concert tickets instead of using a third party app like Eventbrite.

Group Ideas and Other Information:

- RMO members should only have access to music from their section.
- RMO prefers to separate the music exercise section from the music distribution section.
- RMO currently uses the application Green Geeks to support website (can access wordpress from Green Geeks)

- Team received access to the RMO internal website.
- They would prefer a role system over a forum approach
- There is a Mando for Kids class.
- Students could be connected to their teacher with roles.
- We could add a tagging feature to music sheets to specify whether it is an exercise, seasonal piece, etc.
- Current Focus section could be useful
- Some things should be viewable to all roles (Maybe we should have a public section in the “My Music” tab)
